Autocue ("QTV" in the Americas) has been the world leader in teleprompting since its invention in the 1950s. We've led every major innovation thanks to our unrivalled experience and in-house software and hardware development teams. With three best-in-class product ranges – Master, Professional and Starter – all designed and custom built in-house, Autocue offer the widest range of teleprompters in the world, catering for any requirement or budget. Within this range we have some unique products, like our IP-based QMaster/QBox prompting software, which offers in-built redundancy and flexibility, and interfaces to all major third-party newsroom systems, including Avid iNews, ENPS, Octopus, and Dalet.

There are well over 10,000 Autocue systems in use worldwide and a long list of prestigious customers including the BBC, ITV, Sky, CNN, ABC, Fox, NBC, Bloomberg, Doordarshan, Al Jazeera, MBC, and many of the world’s leading politicians and presidents. Whenever you want to use a teleprompter, we will guarantee you the best solution at the best price. For further information on Autocue teleprompting solutions, e-mail sales@autocue.com, call +44 208 665 2992 (UK)/+1 212 929 7755 (US) or visit www.autocue.com.

Autocue ("QTV" in the Americas) is the number one teleprompter manufacturer, with tens of thousands of installed systems across the world.

Established in 1955, we have led every major innovation in teleprompting ever since. Our Master and Professional Series are leading-edge, with a range of products designed to excel in all studio and outside broadcast environments.

SIMPLY THE BEST TELEPROMPTERS THAT MONEY CAN BUY

The best monitor specification...
• In each class, our custom-made teleprompting monitors match or better the specification of any competitor
• Key differentiators for our LED-backlit Master Series monitors include: in-board cable management; integrated, dimmable tally; and the lowest power consumption

The lightest teleprompters...
• The thinnest lightest monitors, with a weight saving of up to 36% over similar teleprompter solutions
• Combined with a lighter mounting plate, the total weight savings is approximately 3.7kgs/8.1lbs on our 17” Master Series unit
• Our Professional Series units are even lighter than the Master Series - though there’s no internal power supply or backlight

The easiest teleprompters to rig and maintain...
• Setup is completely tool-less
• Our standard mounting plates are easier to attach to the tripod and to the camera thanks to their innovative design
• Our hinged hood frames enable easy access to the glass and camera lens – you’ll have to remove screws to do the same with competing units

The most flexible teleprompters...
• The widest range of movement to accommodate any camera and lens
• There’s never any need to roll the camera to centre the lens in the glass, compromising balance
• Continuous and tool-less movement of all components in all directions – other manufacturers only provide a few preset positions and you need to remove the camera, prompter and mounting plate every time you want to move the whole unit forwards and backwards

The most advanced teleprompter software...
• Our teleprompting software delivers everything that you’d expect from a top-end prompting solution, including integrating with all major newsroom systems, complex language handling, live edits, run order management, closed captioning etc.
• Our QMaster/ QBox solution is the only IP-based prompting software in the world, offering unrivalled benefits, including: in-built redundancy as your prompter never fails; prompting from anywhere there’s a network; and unlimited distance between the prompter and operator
• You can add multiple QBoxes to enable individual control of each teleprompter script to allow presenters to rehearse their lines whilst their co-host is speaking, add a server and you can network multiple studios together giving you the ultimate flexibility across a large site

HOW DO I CHOOSE BETWEEN THE MASTER AND PROFESSIONAL SERIES?

Hardware Requirements
- I need to use the teleprompter in a very brightly lit studio or outside in direct sunlight
- I’d like to use SDI for video input (optional)
- I need to interface to a newsroom system via MOS, FTP or a native protocol
- I need to use closed captioning
- I have advanced prompting requirements and would like to consider networked scripting and prompting
- I’d like to prompt out in the field without needing a computer/ operator
- I want broadcast quality but have a very tight budget and am willing to make some trade-offs

Software Requirements
- I need the prompter to be as light as possible - this is my key consideration

QBox Technical Specifications
- Controller Inputs: 1x Serial, 3x USB
- Video Outputs: 3x BNC (Composite) or 1x SDI (optional), plus 1x VGA
- Display Inputs: Ethernet, 3x USB, PS2 keyboard (for configuration)
- Power Input: 12V DC (1 x male 3.5mm jack connector)
- Power Consumption: 1.5-amps
- Dimensions: 23 (W) x 19 (D) x 4.8 (H) (Optional 1U rackmount available)
